

Long-Term Support for Bootstrap Versions 3 and 4

Not ready to upgrade to Bootstrap 5? No problem. With long-term support from OpenLogic, your website(s) and applications built with EOL Bootstrap can keep running smoothly.

Downtime Is Disruptive – and Expensive

Web browser updates and jQuery releases can affect functionality on applications created with end-of-life versions of Bootstrap. With Bootstrap LTS from OpenLogic, get fully tested patches from our secure, private repository so you can avoid downtime and keep your apps supported until you have time to upgrade.

Keep Your Sites Secure and Compliant

Running end-of-life software without updates is risky and compliance regulations often require support for EOL technologies. Only Bootstrap 5 is still being maintained by the open source community, and fixing breaking changes and vulnerabilities internally takes time and resources. If a medium or high severity CVE (CVSS score 4 or higher) in Bootstrap 3 or 4 is disclosed, OpenLogic will issue a patch and notify you.

Don't Rush Your Upgrade

There are major changes in Bootstrap 5, making the upgrade path challenging. JavaScript replaces jQuery, Internet Explorer 11 and lower are not supported, and some sites and apps may need to be rewritten. OpenLogic's long-term support buys you more time on Bootstrap 3 or 4 while you figure out the next steps.

Why Trust OpenLogic?

OpenLogic by Perforce has more than 20 years of experience supporting hundreds of open source technologies. Our dedicated team of JavaScript and Bootstrap experts monitor 24/7 for breaking changes and CVEs. We offer competitive pricing with no setup fees or surprise charges, and there is no limit to the number of developers or support tickets you can submit.
