

# Open Source DORA Compliance

Long-Term Support and Expert Guidance for Digital Operational Resilience

The EU's **Digital Operational Resilience Act (DORA)** requires financial entities and their technology partners to maintain ICT systems that can withstand, respond to, and recover from digital disruptions.

OpenLogic helps organizations meet DORA requirements by providing **long term support, security patching, migration services, and SLA backed expert support** for open source software across the stack.

## DORA and OSS: What Are the Risks?

DORA introduces strict expectations around ICT risk management, resilience testing, and third party oversight. Organizations subject to DORA face challenges such as:

- Unsupported or EOL open source software that no longer receives security patches
- Increased regulatory scrutiny and audits of critical systems
- Fragmented OSS support with no one party responsible for compliance
- Limited internal resources to manage migrations while maintaining uptime

## How OpenLogic Can Help

OpenLogic provides a **vendor neutral, accountable support layer** that enables organizations to maintain DORA compliance while reducing operational risk.

### Stability and Security After EOL

**Long-term support** and **security patches** for EOL software and legacy systems, and expert-led **migrations** to minimize disruption.

### SLAs For Comprehensive Coverage

Guaranteed response times and up to 24/7/365 **technical support** delivered by experienced Enterprise Architects for **400+ technologies**.

### Compliance Accountability

Consolidated open source support under a single reputable partner who can assess and identify compliance gaps — and provide evidence of **proactive risk management** across your stack.

## Key Benefits

- Maintain operational stability while meeting DORA requirements
- Reduce risk from unsupported or legacy open source software
- Demonstrate SLA-backed, enterprise-grade support to regulators
- Modernize open source infrastructure on your schedule

## Why Choose OpenLogic?

Financial institutions depend on open source to run mission-critical systems, where security, compliance, and reliability are non-negotiable. OpenLogic helps banks and financial services organizations deploy open source software with confidence — reducing risk while maintaining full architectural control.

For more than two decades, OpenLogic has been providing end-to-end support and services for hundreds of open source technologies, including Linux distributions, data platforms, and cloud-native tools. From navigating complex migrations to addressing skills gaps and meeting regulatory requirements, enterprises trust OpenLogic to keep their OSS secure, compliant, and performant.

### Take the First Step To Get DORA-Ready

By preparing for DORA now, you can avoid last-minute disruptions, failed audits, fines, and legal headaches. Talk to OpenLogic today to find out how we can help you comply with DORA regulations.
