

Long-Term Support for AngularJS

Lengthen your AngularJS migration runway with long-term support from OpenLogic. Our team of AngularJS experts provide fixes or workarounds for medium and high severity CVEs in the form of patches to keep AngularJS-based applications secure. We also provide fixes when new versions of web browsers or jQuery updates affect functionality of AngularJS.

Long-Term Support

Regardless of your path, migrating from AngularJS to another framework is more akin to a rewrite than a typical migration. This means that a migration can cost your team significant time and money. With OpenLogic long-term support for AngularJS, your team can perform a successful migration on your own terms and timeline without risking exposure to medium and high severity CVEs or functionality issues due to new web browser versions or new jQuery library versions.

Security Patches

Running end-of-life software without security patches can be disastrous, and fixing vulnerabilities on your own can take considerable time and resources. OpenLogic extended long-term support for AngularJS until 2030.

Keep Your Application Supported on New Browser Versions

With our long-term support, you will get AngularJS patches when new major web browser releases break AngularJS functionality.

Patches For Breaking jQuery Functionality

The popular jQuery library is frequently updated, and there is a chance that a change in a new version of jQuery could break AngularJS functionality. If there are breaking changes introduced by new versions of jQuery, OpenLogic's AngularJS LTS offerings include AngularJS patches.

Browser	Supported Version
Internet Explorer	9.0.0, 10.0.0, 11.0.0
Firefox	2 most recent versions
Chrome	2 most recent versions
Safari	2 most recent versions
Mobile Safari	2 most recent versions
Edge	2 most recent versions

Why Trust OpenLogic?

OpenLogic by Perforce has over 20 years of experience supporting hundreds of open source technologies. Our dedicated team of AngularJS experts is ready to help you 24/7/365. We offer competitive pricing with no set-up fees or surprise charges, and there is no limit to the number of developers.
