

## DATASHEET

# CentOS 6 Enterprise Support

OpenLogic provides long-term support for RHEL 6 or CentOS 6, while also helping you plan and complete a successful upgrade or migration with minimal risk.

## Options for RHEL 6 Users

RHEL 6 and CentOS 6 EOL is November 30, 2020. RedHat is offering extended lifecycle support for RHEL 6, but it is expensive and limited to technical support only, no security patches. This will leave many organizations' operating systems open to security vulnerabilities.

Those who are on RHEL 6 either have to rush an upgrade, pay new costs for extended lifecycle support for RedHat, or they can migrate CentOS 6. The OpenLogic team is here to help make this decision easier.

## What Does CentOS 6 Support from OpenLogic Look Like?

OpenLogic offers similar support with CentOS that Red Hat offers with RHEL, but our team goes beyond the operating system layer and takes an architectural-level approach to tackling challenges. Your team can eliminate license costs and vendor lock-in by adopting a truly open model.

When you choose OpenLogic for your migration and support of CentOS 6, you receive the following:

- Extended lifetime usability of CentOS-powered solutions

- Architectural Minimization of Attack Vectors
- Backporting Community-Provided Patches
- Software and Development Guidance Beyond CentOS
- Roadmap for future CentOS upgrades.
- Guaranteed SLAs for Support

## Why is OpenLogic Qualified to Support CentOS?

Our team consists of experienced architects with a minimum of 15 years of experience and expertise working on production applications. We believe in and support the open source community development model, and that is reflected in our contributions to CentOS.

Our team creates and manages the official CentOS images for Amazon Web Services (AWS) and Microsoft Azure. In Azure's case, OpenLogic creates and maintains Microsoft's official CentOS image. OpenLogic also supports CentOS on Google Cloud.

## Connect with a CentOS Expert

With OpenLogic you can trust you'll be working with an experienced architect with a wealth of years of experience solving complex CentOS and open source challenges.

If you haven't upgraded from RHEL or CentOS 6, OpenLogic can help protect your business against the risks. Connect with our RHEL and CentOS team so we can help determine a course of action that matches your business.
