Long-Term Support for Spring Boot and Spring Framework

Upgrade on Your Schedule With Spring Boot and Spring Framework LTS

With Spring Boot and Spring Framework long-term support, you can take the time you need to plan your migration without risking the security of your applications.

Stay Secure, Compliant, and Audit-Ready With Spring LTS

- **Protect Your Apps:** Prevent vulnerability exploits of unsupported Spring versions that could cause downtime, data loss, or worse.

- **Avoid Compliance Hassles:** Save time and resources by not having to reassess if requirements are being met with every new release.

- **Maintain Stability:** Keep running a stable LTS version until you're ready to migrate and know how updates will impact your apps.

- **Extend Your Runway:** Allow third-party dependencies to update and take time to test before adopting bleeding-edge versions.

Solution Details

- Supported versions: **Spring Boot 2.7** (3.2 coming soon), **Spring Framework 5.3** (6.1 coming soon)

- Coverage for a minimum of **2 years after community EOL**

- Security patches for critical and high CVEs (7+ CVSS score)

- Bronze and Premium support SLAs available

Upgrade When You're Ready, Backed by Long-Term Support

The new 6-month Spring release model puts more pressure on teams to upgrade more frequently. **This accelerated cadence means shorter support lifecycles** — making it challenging for organizations to understand how changes will impact their applications before their Spring Boot or Spring Framework version reaches end-of-life.

Why Choose OpenLogic for Spring LTS?

Our expertise goes far beyond the Spring ecosystem. For more than twenty years, we have provided SLA-backed support for the most in-demand open source technologies. Our Enterprise Architects can provide guidance before, during, and after your Spring migration — for your entire Java stack.
