

Tomcat Long-Term Support (LTS)

Stay secure and stable with Tomcat LTS — without risking the functionality of your mission-critical applications or creating compliance issues.

Keep Your Java Stack Secure. Avoid Forced Upgrades.

-  **Protect Your Apps:** Prevent Cross-Site Scripting (XSS) and Denial of Service (DoS) attacks that can cause costly downtime and data breaches.
-  **Extend Your Runway:** Safely remain on older, stable Tomcat versions years after community support ends.
-  **Modernize on Your Schedule:** Upgrading to Tomcat 9, 10, or 11 requires moving to newer frameworks and Java versions, pulling dev resources away from product work.
-  **Stay Compliant:** Failing an audit has serious consequences — you could lose customers, incur fines, or even face legal action.

Key Benefits of Tomcat LTS

- Available for Tomcat 8.5 through December 2028
- Future LTS releases supported for at least 3 years after community EOL
- Guaranteed patches for critical and high CVEs (7+ CVSS score); others evaluated on a case-by-case basis
- Easy installation from our secure, private repo

Why Choose OpenLogic?

Some vendors promise never-ending or endless support, but the truth is that **LTS is not a permanent solution**. And when it's time to migrate, you need an **expert partner** who can make that transition **as painless as possible**.

For more than twenty years, OpenLogic has provided **SLA-backed support** for OSS. Our Enterprise Architects can provide **unbiased guidance for your Java stack** and answer questions about patches, upgrades, integrations, and more.
