Extended Support for OpenJDK

Red Hat support for OpenJDK 8 is ending. Components surrounding the JDK are also aging out of support, creating overlapping security, compatibility, and migration challenges. Keep running Java 8 or 11 without switching vendors or rushing a migration.

OpenJDK Extended Support helps you maintain OpenJDK 8 and 11 environments, so you don't have to worry about failing an audit due to unpatched CVEs, broken Spring, Tomcat, or Kafka dependencies from a forced upgrade, or a migration project that can't be completed before support lapses. You retain open source Java under the same license, without adopting a proprietary JDK fork or adding ecosystem lock-in.

Support the Whole Java Stack

Get one support partner for the JDK and the open source components surrounding it:

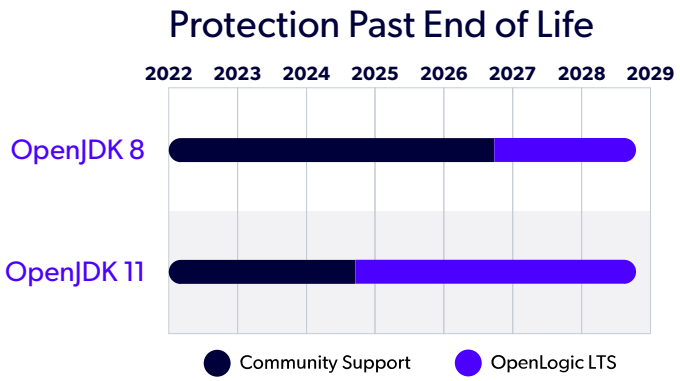

- OpenJDK 8 and 11
- Spring Framework 5.3 and above
- Spring Boot 2.7 and above
- Apache Tomcat 8.5 and above
- Apache Kafka 3.x and above clients
- Additional open source technologies across your environment

Keep Java Supported Without Rushing an Upgrade

Maintain the Java stack you rely on today while building the foundation for a practical, coordinated path forward.

Proven Java and Open Source Expertise

- **96%** of customers rate OpenLogic long-term support positively (4.74 out of 5)
- **746+** Java-related support cases resolved worldwide
- **150+** organizations engaged on Java-related services
- **20+** industries supported over more than seven years

Choose the Coverage You Need

OpenJDK Premium

OpenJDK 8 and 11 Extended Support builds, CVE patching, and 24/7 Gold support with P1 and P2 response coverage.

OpenJDK Bronze

OpenJDK 8 and 11 Extended Support builds, CVE patching, and business-day response coverage.

Pricing is based on instances rather than total employee count.

Upgrade on Your Schedule

When you are ready to move, OpenLogic can help you migrate to Java 17, 21, or 25. Migration and CI/CD services are delivered by the same team supporting your current runtime, connecting near-term continuity with long-term modernization.

Strengthen Security and Patch Management

OpenLogic provides fully signed and tested builds through our private repository, and all the documentation you need for patch management and audit evidence.

- **Critical vulnerabilities:** CVSS 9.0+, remediated within 14 days
- **High-severity vulnerabilities:** CVSS 7.0–8.9, remediated within 30 days
- **Medium and low severity vulnerabilities** may be patched upon request based on customer demand
