MySQL Extended Support & Migration Services

Secure MySQL Today. Modernize on Your Timeline.

MySQL 5.7 and 8.0 have reached end of life, leaving organizations exposed to security vulnerabilities, compliance risks, and growing operational challenges. At the same time, upgrading to a supported version can be a complex undertaking involving schema changes, deprecated features, application dependencies, and potential downtime.

OpenLogic provides a practical path forward: **MySQL Extended Support** to keep your environments secure today, plus **expert migration services** to help you modernize when the time is right.

MySQL Extended Support

Extend support for MySQL 5.7 and 8.0 through at least September 2028 with:

- Security updates and CVE remediation
- Continuous vulnerability monitoring and security backports
- Support for on-premises, cloud, hybrid, and multi-cloud deployments
- 24x7x365 SLA-backed technical support available at the Premium tier

MySQL Migration Services

When you're ready to modernize, OpenLogic can guide the process from start to finish by:

- Building a tailored migration roadmap that minimizes downtime
- Navigating schema, query, and compatibility challenges
- Validating infrastructure and operational dependencies
- Executing migrations to MySQL 8.4 or alternative databases such as MariaDB or PostgreSQL

Why Choose OpenLogic?

More than 40 enterprise customers — including global banks, top U.S. telecom, and semiconductor leaders — trust OpenLogic to support their MySQL deployments.

- **One Partner for the Entire Lifecycle:** Stay secure today with MySQL Extended Support and migrate on your schedule with expert guidance from planning through execution.
- **Beyond the Database:** With expertise spanning 400+ open source technologies, OpenLogic ensures your migration succeeds across the full stack.
- **Reduce Risk and Preserve Flexibility:** Whether your future includes MySQL 8.4, MariaDB, PostgreSQL, or a broader data stack modernization initiative, OpenLogic helps you make informed decisions without rushing critical changes.
