perforce

OpenLogic

AngularJS Long-Term Support

Regardless of your path, migrating from AngularJS to another framework is closer to a rewrite than a typical migration, costing significant time and money. With AngularJS LTS for 1.5.x, 1.6.x, and 1.8.x, you can extend your migration runway and execute a successful transition on your own timeline without risking security exposures or functionality issues.

Get Peace of Mind and Protection Through 2030

Our AngularJS experts provide security patches, fixes, and workarounds to keep your applications secure and performant until you're ready to migrate.

Stay Secure and Compliant

Running unpatched EOL software can be disastrous. Our AngularJS LTS includes patches for medium-to-critical severity vulnerabilities (CVSS score of 4 or above) to help you reduce risk and meet compliance requirements. If a new CVE is disclosed, you'll be covered.

Prevent Browser and jQuery Conflicts

Major browser releases and updates to the popular jQuery library can cause breaking changes in older AngularJS applications. With our long-term support, you'll get fixes to keep your application fully functional.

Browser	Supported Version
Internet Explorer	9.0.0, 10.0.0, 11.0.0
Firefox	2 most recent versions
Chrome	2 most recent versions
Safari	2 most recent versions
Mobile Safari	2 most recent versions
Edge	2 most recent versions
